-:- ALTENATIVE PRODUCTS: 3 ISOFORMS; 1A, 1B (SHOWN HERE) AND 1C;
PRODUCED BY ALTENATIVE SPLICING.
-:- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
MAP KINASE KINASE KIDRASE JOBFAMILY.
-:- SIMILARITY: IN THE C-TERMINAL SECTION; STRONG, TO C21ORF7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 184 APEGGTIIYMPPENYEPGQKSRASIKHDIYSYAVITWEVLSRKQPFEDVTNP-LQIMYSV

protein kinase ATN1-like protein - Arabidopsis thaliana
N;Alternate names: protein T3A5.110
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 04-Feb-2000 #sequence_revision 04-Feb-2000 #text_change 17-Mar-2000
C;Accession: T46150; T08394
F;Blococker, H., Mewes, H.W.; Mayer, K.F.X.; Lemcke, K.; Schueller, C.; Quetier, F.; S submitted to the Protein Sequence Database, December 1999
                                                                                                                                                                                                                                                                                                                                                                                             Submitted to the EMBL Data Library, April 1998
A; Description: Genomic sequence for Arabidopsis thaliana BAC F22013.
A; Reference number: 214200
A; Reference number: 214200
A; Status: translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-1015 <SHI>A; CESSION A; MOLECULE A; MOLECULE A; CESSION A; MOLECULE A; CESSION A; MOLECULE A; CESSION A; MOLECULE A; CESSION A; CESSION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A.Experimental source: cultivar Columbia; BAC clone T3A5
